1. Executive Summary

PAYA is a Barcelona-based technology services company poised to redefine facility management within the food-service industry. We are delivering the market's first fully integrated Building Management System (BMS) specifically engineered for the high-velocity environment of restaurants and commercial kitchens.

The current landscape of restaurant operations is fragile. Establishments depend entirely on a complex ecosystem of critical technical systems including refrigeration, heavy cooking equipment, HVAC, plumbing, and fire safety. Yet, the industry standard for maintaining these assets is archaic: owners rely on a fragmented network of independent technicians, reactive "emergency" repairs, nonexistent documentation, and zero centralized control. This reactive model leads to catastrophic downtime, unmonitored energy waste, and significant compliance risks.

PAYA transforms this outdated paradigm by establishing a "Maintenance Control Center" for the hospitality sector. By fusing multi-discipline technical execution with a proprietary digital platform, we offer a hybrid solution that includes QR-based asset traceability, automated compliance management, and IoT-enabled predictive maintenance. Our mission is to ensure "zero maintenance stress" and "maximum uptime," allowing restaurateurs to focus on culinary excellence rather than equipment failure.

Financially, PAYA is built on a robust, scalable subscription model that generates recurring annual recurring revenue (ARR), complemented by high-margin corrective services and digital consulting fees. With conservative projections forecasting revenues growing from €240k in Year 1 to €1.41M by Year 3, PAYA represents a high-growth opportunity to modernize a critical, underserved market.

2. Company Overview

2.1. Business Identify

PAYA differentiates itself by operating as a hybrid operational–digital company. Unlike traditional maintenance firms that view technology as an afterthought, or pure software companies that lack boots-on-the-ground capability, PAYA integrates both. We are not just fixing broken ovens; we are deploying a digital infrastructure platform that acts as the central nervous system for restaurant operations. This integration allows us to replace reactive firefighting with data-driven reliability engineering, a methodology inspired by the rigorous safety standards of the aviation industry.

2.2. Mission and Core Philosophy

Our mission is to ensure that every restaurant operates safely, reliably, and efficiently, providing owners with complete transparency over their maintenance, compliance, and equipment health. This is underpinned by our core values of reliability, transparency, and innovation.

We believe that restaurant maintenance should be invisible yet omnipresent. Our vision is to become the reference partner for digital maintenance in Barcelona and eventually scale across Europe through a franchising and licensing model.

2.3. Legal Form and Ownership

Legal form: Sociedad Limitada (S.L.), registered in Barcelona.

Ownership: Initially 100% held by the founder(s), with optional minority investors in later stages.

2.4. Strategic Objectives (Years 1–3)

Year 1 (Validation & Foundation): The primary objective is to secure 25–35 partner restaurants and launch the Minimum Viable Product (MVP) of the platform. We aim to stabilize Monthly Recurring Revenue (MRR) between €8k–€10k while refining our operational SOPs.

Year 2 (Integration & Growth): We will expand our footprint to 70–90 restaurants and fully deploy our IoT sensor suite. Revenue targets exceed €300k as we introduce advanced analytics to the platform.

Year 3 (Scale & Expansion): The focus shifts to multi-city expansion and franchising preparation. We target 130–150 locations and revenue surpassing €600k, solidifying our position as the market leader in Catalonia.

3. Market Analysis

3.1. Market Problem: The Reliability Gap & Operational Pain Points

The primary market focus comprises independent restaurants, small chains, gastro-bars, hotel restaurants, and ghost kitchens within the Barcelona metropolitan area. While these food-service operators depend entirely on complex, industrial-grade technical systems to function, they currently service this infrastructure using fragmented, residential-grade processes. This discrepancy creates a critical "Reliability Gap" that manifests in four distinct areas of operational vulnerability:

- **Service Fragmentation & Inefficiency:** The current maintenance model is disjointed. Restaurant owners must coordinate a patchwork of unconnected vendors like plumbers, electricians, and refrigeration specialists who do not communicate or share data. This lack of centralized control leads to inefficient "reactive firefighting" rather than strategic asset care.
- **The Documentation Void:** Critical compliance records, such as gas inspections and fire safety certificates, are frequently managed manually or lost in physical paper binders. This lack of structured, accessible documentation exposes owners to significant regulatory fines, insurance liability, and safety hazards.
- **Energy Blindness & Unplanned Costs:** Without the visibility provided by modern sensors, equipment often runs inefficiently for extended periods such as a degraded fridge seal or a straining motor before a failure occurs. This "energy blindness" inflates utility bills and leads to frequent, expensive emergency breakdowns and product loss.
- **Operational Fragility:** Due to the high dependency on technical equipment, the lack of structured preventive maintenance means that a single asset failure can halt operations. PAYA resolves these compounding issues by consolidating all maintenance, compliance, and monitoring needs into a single, integrated digital ecosystem. PAYA addresses all of these with a single integrated solution.

3.2. Competitive Landscape

PAYA occupies a "Blue Ocean" position by combining four distinct verticals that are traditionally siloed:

- **Preventive Maintenance** (Physical service)
- **IoT & Energy Monitoring** (Hardware/Tech)
- **Compliance Management** (Legal/Admin)
- **Digital Asset History** (Software)

Traditional competitors are "The Local Handyman" (reactive, unorganized, no data) or large "Facility Management Firms" (expensive, slow, unspecialized for kitchens). PAYA is

the only provider offering a QR-based maintenance history system specifically for this sector, creating a high barrier to entry for non-digital competitors.

4. Products and Services

4.1. Integrated Preventive Maintenance

Our core offering is a scheduled, preventive care program covering the entire technical spectrum of a commercial kitchen. Unlike reactive repairs, our technicians utilize standardized digital checklists validated through QR-code scanning at each specific asset. This ensures no corner is cut.

- **Scope of Work:** We cover refrigeration (coil cleaning, calibration), cooking equipment (burner inspection, safety testing), extraction/ventilation (airflow verification), HVAC, plumbing, and electrical distribution.
- **Digital Verification:** Every action is digitally recorded, timestamped, and stored permanently in the cloud, providing an audit-proof trail for insurance and health inspectors.

4.2. Digital Ecosystem

The physical service is powered by our proprietary software platform:

- **QR-Code Asset Tagging:** Every piece of equipment receives a unique digital identity. A simple scan reveals its entire lifecycle: photos, specs, maintenance history, and compliance certificates.
- **Automated Compliance Module:** The system automatically tracks regulatory obligations (e.g., hood cleaning, fire extinguisher expiry) and sends alerts via Email, SMS, and WhatsApp Business API to prevent lapses.
- **IoT & Predictive Maintenance:** We install sensors to detect early failure indicators such as rising fridge temperatures or abnormal motor vibrations allowing us to intervene proactively before food spoils or service is interrupted.
- **Energy Efficiency Dashboard:** By monitoring energy use across refrigeration and HVAC, we provide actionable data to reduce utility bills, turning maintenance into a cost-saving center.

5. Strategic "Go-to-Market" & Marketing Plan

5.1. Marketing Messaging

Our value proposition focuses on risk reduction and control. We do not sell "repairs"; we sell "business continuity." Key messages include:

- **"Your entire kitchen, one QR scan."**

- "Zero surprises. Total control."
- "Prevent failures before they happen."

5.2. Sales Channels & Acquisition Strategy

To achieve the Year 1 target of 35 restaurants, we will deploy a multi-channel strategy:

- **Direct Sales:** Targeting high-volume gastro-bars and small chains in Barcelona where the cost of downtime is highest.
- **Strategic Partnerships:**

Kitchen Installers: Partnering with companies that build commercial kitchens to include PAYA packages as an "extended warranty" service at the point of sale.

Insurance Companies: Negotiating referral programs where restaurants using PAYA get premium reductions due to verified fire-safety and compliance maintenance.

- **Inbound Content Marketing:** Publishing case studies on "Energy Savings in Commercial Kitchens" to attract owners looking to cut costs.

6. Operational Plan

6.1. Service Delivery Model

Operations are designed for scalability and quality control. Technicians are equipped with tablets running the PAYA app, which functions in "Offline Mode" for basements and thick-walled kitchens. Workflows are strictly governed by Standard Operating Procedures (SOPs) and quality audits to ensure the "aviation-grade" promise is kept.

6.2. Technology Development Roadmap

- **Phase 1 (0–6 Months):** Launch of the MVP platform focusing on the QR system, asset registry, and basic compliance tracking.
- **Phase 2 (6–18 Months):** Integration of IoT sensor data streams and development of the energy dashboard with anomaly detection.
- **Phase 3 (18–36 Months):** Implementation of AI-based risk scoring and prescriptive maintenance benchmarking, allowing us to tell a client exactly when to replace a machine versus repairing it.

7. Financial Plan

7.1. Revenue Model

PAYA utilizes a high quality recurring revenue model.

- **Subscriptions:** Tiered monthly fees (Basic €400/mo to Premium €1,000/mo) provide stable cash flow.
- **Corrective Services:** While preventive care reduces breakdowns, inevitable repairs are billed separately, serving as a high margin upsell.
- **IoT & Consulting:** Installation fees for sensors and specialized energy consulting add significant upside revenue.

7.2. Projections

Financials are forecasted to scale rapidly as the subscriber base grows and IoT adoption increases:

- **Year 1:** €240k (Focus on early adopters and MVP).
- **Year 2:** €717k (Growth phase with 70–90 restaurants).
- **Year 3:** €1.41M (Market maturity and expansion).

Note: By Year 3, IoT monitoring alone is projected to add ~€150k/year in high margin revenue.

7.3. Key Assumptions

Average subscription fee per client per month

Year 1: €580 ($0.5 \times 400 + 0.4 \times 700 + 0.1 \times 1,000$)

Year 2: €650 ($0.4 \times 400 + 0.4 \times 700 + 0.15 \times 1,000 + 0.05 \times 1,200$)

Year 3: €360 ($0.3 \times 400 + 0.4 \times 700 + 0.2 \times 1,000 + 0.1 \times 1,300$)

Number of active subscription clients

Year 1: 30

Year 2: 80

Year 3: 140

Additional revenue (repairs, projects, IoT, consulting). Assumed 15% on top of subscription revenue.

Direct cost ratio (technician labour, parts, subcontractors): 40% of total revenue.

Annual overhead (fixed costs)

Year 1: €40,000

Year 2: €70,000

Year 3: €100,000

7.4. Revenue Calculations

Subscription Revenue = Clients × Avg monthly fee × 12

Additional Revenue = 15% of subscription revenue

Total Revenue = Subscription + Additional

Year 1:

Subscription: $30 \times 580 \times 12 = \text{€ } 208,800$

Additional (15%): $\text{€ } 31,320$

Total: **€ 240,120**

Year 2:

Subscription: $80 \times 650 \times 12 = \text{€ } 624,000$

Additional: $\text{€ } 93,600$

Total: **€ 717,600**

Year 3:

Subscription: $140 \times 360 \times 12 = \text{€ } 1,226,400$

Additional: $\text{€ } 183,960$

Total: **€ 1,410,360**

Year Financial Table (Summary)

All figures in euros (€).

Item	Year 1	Year 2	Year 3
Number of clients	30	80	140
Avg fee per client/month	580	650	730
Subscription revenue	208,800	624,000	1,226,400
Additional revenue (15%)	31,320	93,600	183,960
Total revenue	240,120	717,600	1,410,360
Direct costs (40% revenue)	96,048	287,040	564,144
Gross margin	144,072	430,560	846,216
Overhead (fixed costs)	40,000	70,000	100,000
Operating profit (EBIT)	104,072	360,560	746,216

7.5. Initial Investment Estimate

Tools & equipment: €7,000

Initial parts and consumables: €3,000

Vehicle (used) or lease: €10,000

Company setup, legal, accounting: €2,000

Website + initial software infrastructure: €1,500

Marketing launch: €1,500

Total initial investment: ~€25,000

8. Risk Analysis and Mitigation

Technician recruitment: mitigate with training and attractive conditions.

Software delays: mitigate with phased rollout and manual backup processes.

Cashflow: mitigate through subscriptions, careful cost control, and possibly small credit line.

Competitive pricing pressure: differentiate on value and technology, not on being cheapest.

9. Strategic Enhancements

a) The "NexaCertified" Trust Badge

Create a physical and digital sticker ("NexaCertified: Safe & Clean") that restaurants can display on their doors and menus. This turns a back of house operational cost into a front of house marketing asset, signaling to diners that the restaurant meets the highest standards of hygiene, air quality, and safety. This increases the stickiness of the subscription that restaurants won't want to lose the badge.

b) Dynamic Equipment Lifecycle Planning (CapEx Optimization)

Move beyond just maintenance to "Asset Management." Use the accumulated data to generate annual "CapEx Reports" for owners, advising them on which machines are costing more to maintain than to replace. This positions PAYA as a strategic financial advisor, not just a repair service.

c) Insurance Premium Arbitrage

Actively pursue a partnership with a major business insurer. Since PAYA digitally verifies fire safety systems (hood cleaning, extinguishers, electrical load), we can statistically prove lower risk. Offering an exclusive insurance discount to PAYA subscribers would be a massive sales catalyst that competitors cannot replicate.

10. Implementation Roadmap

Months 0–3: Legal setup, tools, van, brand, MVP specification.

Months 4–6: MVP launch, first pilot clients, process refinement.

Months 7–12: Commercial expansion in Barcelona, stable operations.

Year 2: IoT launch, team expansion, consolidation in Catalunya.

Year 3: Optimization, improved profitability, exploration of new cities or licensing model.
